SUMMARY

Software Engineer with 8 years of experience building high-performance interactive applications, HTML5 games using Three.js and PixiJS. Adept at designing performant and optimized games that run smoothly in browser. Focused on continuous technical improvement, and delivering measurable product value.

PROFESSIONAL EXPERIENCE

Software Engineer 01/2019 – Present

PlayToMax

- Built over 300 playable ads across diverse genres — reaching millions of active users. Non-NDA projects are showcased on my online portfolio.
- Designed and developed internal tools and game engines that improved development efficiency, accelerated production, and enabled faster iteration.
- Mentored and guided developers, strengthening their technical skills and fostering professional growth across the team.
- Produced builds for such User Acquisition & Performance Channels**:** Meta Ads, Google Ads, TikTok, AppLovin (MAX), Unity Ads, Liftoff, Moloco and others.

EDUCATION

Masters degree in Statistics 09/2006 – 2011

Oles Honchar Dnipro National University, Dnipro Dnipro, Ukraine

SKILLS

- Javascript
- Three.js
- Webpack
- PIXI.js
- Blender
- Node.js

PROJECTS

Sword Play
This is one of the few projects which was not under NDA, and I'm very proud of it.

- Reimplemented a Unity game in Three.js for HTML5, delivering a highly optimized browser-based experience.
- Developed a custom animation conversion tool to bring Unity animations into Three.js, allowing artists to reuse existing animations on skinned meshes and significantly reducing manual work and production time.
- Sword slicing animation was using proprietary unity math functions, but were flawlessly implemented within available tools.

Exploding kittens
Took over the Exploding Kittens project for Facebook Messenger Rooms and resolved a deeply rooted architectural issue in the server-side state machine's animation handling, overcoming months of accumulated technical complexity.

Spyfall/Werewolves/Crosswords
A multide of projects developed for Facebook Messenger Rooms with PIXI.js for frontend and firebase events for backend.

- These projects taught me a lot about client-server communication.
